

Solutions for pome fruit.

Staging graphics depicted here are for quick reference only. Refer to individual product pages and product labels for detailed staging information.

Darker areas reflect recommended application timing for Apogee® plant growth regulator. Darker areas reflect recommended application timing for Pristine® fungicide.

¹ Where possible, rotate the use of Group M fungicides with different groups that control the same pathogens.
² Where possible, rotate the use of Group M² fungicides with different groups that control the same pathogens.
³ Do not apply more than two (2) times per growing season. Rotate miticides with different modes of action to ensure that each generation is only exposed to Nealta® once.
⁴ Do not apply more than two (2) sequential applications before alternating to a fungicide with a different mode of action other than Group 7 and Group 11.
⁵ Do not apply more than two (2) sequential applications before alternating to a fungicide with a different mode of action that controls the same pathogens.
⁶ Do not make more than a total of four (4) applications per season. BASF recommends making no more than two (2) consecutive applications before alternating to an effective non-strobilurin fungicide with a different mode of action.
