

# BASF fungicide sustainability guidelines

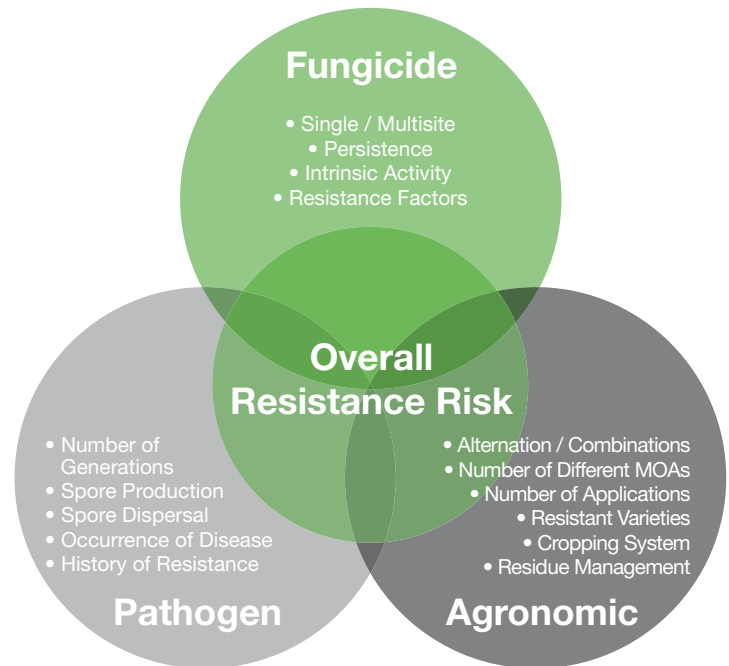

## BASF Fungicide Sustainability Guidelines for Western Canadian Field Crops

- Label Rates**
  - Apply at full label rates early and preventatively to ensure effective disease control on the target disease pest.
- 1 Solo App.**
  - Only use one application of a single active ingredient fungicide per season.\*
- Rotate**
  - Rotate to a fungicide of an alternative mode of action or product that contains an additional mode of action when more than one application per year is needed for a target pest.
- Spectrum**
  - Active ingredients in mixtures or co-formulated products should either control target pest alone or provide additional benefit such as increased spectrum or curative properties.

These guidelines are specific to BASF Fungicides for field crops in Western Canada and should not be used in isolation but within a sustainable disease management system.

\* Recommendations would change in crops where > 3 fungicide applications are applied per season.
