## What is COTEGRA?

- A broad-spectrum fungicide that provides a new era of *Sclerotinia* management.

## Active Ingredients

- Combines two leading actives for *Sclerotinia*: Boscalid—Group 7 and Prothioconazole—Group 3.

## Registered Crops

- |   |   |
|---|---|

|---|---|

## Diseases Controlled

- *Sclerotinia* / White mold

## Application Timing

- Canola: 20 to 50 per cent flowering
- Pulses: Beginning of flowering or at first sign of disease.
- Soybean: Prior to disease development – Late R1/R2 to R3 stage.

## Feature Benefits

- Strong disease management in a wide range of crops.
- Provides a new era of *Sclerotinia* management to maximize yields and help growers reach their production goals.
- Increased crop yields and significant decreases in disease incidence, in comparison to UTC (untreated check) and competitive products in more than 50 field-scale trials in 2015 and 2016.
