

RESEARCH UPDATE

These products are currently being assessed for registration under the Pest Control Products Act.* The information presented here is for research purposes only.

BASF
We create chemistry

Sefina™
Insecticide

Versys™
Insecticide

Sefina and Versys insecticides include a new active ingredient from BASF. They offer control of piercing/sucking insects through a unique mode of action with no known cross resistance to other chemistries. Sefina and Versys have favourable environmental profiles with low acute toxicity to mammals, fish, birds, beneficial insect predators and pollinators.

Key crops and pests

Sefina and Versys control piercing/sucking insect pests, including aphids and whiteflies. Sefina has been submitted to the Pest Management Regulatory Agency for use on soybeans and potatoes and Versys for use on a wide range of fruit and vegetable crops including *Brassica*, cucurbits, leafy and fruiting vegetables, pome and stone fruit and tree nuts.

Features

- Unique mode of action; no known cross resistance with other chemistries
- Fast onset of feeding cessation
- Low toxicity to beneficial insect predators and pollinators

Benefits

- Effective control of target insects for up to 21 days, including aphids and whiteflies
- New tool for resistance management
- Compatible with IPM programs

*They cannot be manufactured, imported, distributed or used in Canada at this time, unless explicit authorization has been obtained from Health Canada to use these products for the purpose of conducting research under the Pest Control Products Regulations.
